RIPTIDE TANK

- BVC technology
- Airflow control
- Industry Leading 0.5ohm Vertical Coil atomizer
- Stainless steel construction
- Pyrex tube 2.0 ml capacity

1. PRODUCT STRUCTURE

2. HOW TO USE
1. Take out the atomizer from the package, separate the bottom cap from the upper part and then drip 5-6 drops along the inner wall of the new vertical coil and wait for about 1 minute until the whole cotton pad is soaked when you use it for the first time.
2. Invert the upper part, filling the tube with e-liquid. The maximum capacity is 2.0 ml.
3. Combine the two parts and wait for 2 minutes until the e-liquid invade the vertical coil totally and let the oil in cotton pad to the full.
4. Screw in the battery, connect the battery power and then inhale it from the drip tip, the smoke will come out.
5. Adjusting atomizer positive electrode. The length of rotating a circle is 0.5 mm.

3. HOW TO FILL:

- Screw out the upper part of the atomizer.
- Fill the liquid to tank. Please don't fill the liquid into middle tube.
- Put back the upper part of the atomizer

When replacing the atomizer:
1. Remove the old atomizer.
2. Place a new atomizer in the base of the tank.
3. Drip three to four drops of E-liquid in side the new atomizer. Wait two min. Repeat this step until the wicking material is fully soaked.
4. Fill your tank. Then assemble. "Now you can start the coil break in". At a lower power setting. Start vaping. As you vape, about every four puffs, slowly adjust the power up. This step is important for the best flavor and performance.

Warning!
This is an advanced user item. The atomizer is 0.5 ohm. Please use with 20amp limit or higher, high drain, lithium ion batteries.

Pay attention
- Screw out the upper part of the atomizer, then check the vertical coil whether it is loose or not in the bottom cap. If yes, please turn clockwise to tighten it.
- Wait for 2 minutes until the e-liquid invade the vertical coil totally and let the liquid in cotton pad to the full.

Warning: When you use it in the first time, drip 5-6 drops along the inner wall of the new vertical coil and wait for about 1 minute until the whole cotton pad is soaked.
